

REMOTE DATA MONITORING

Minimize downtime, maximize profit and focus on the big picture with a turnkey remote data monitoring service that brings you the data to make solid decisions—with less CAPEX investment and risk.

SPL establishes all of the systems and teams it takes for total remote asset data monitoring—including measurement installation, calibration, analytical planning and data communications systems. We spec the system, install everything you need, ensure measurement accuracy, allocate people and facilities for analysis, and operate the whole platform on an ongoing basis.

- Get 24/7 remote access to hydrocarbon data from any Web-enabled or mobile device
- Save on the significant CAPEX investment of a Supervisory Control And Data Acquisition (SCADA) system
- Avoid matters of hardware depreciation, technical investment and issues surrounding database management, server performance, data security or system redundancy
- Focus your attention on more strategic and decision-making matters
- Keep your crew safe from unnecessary field hazards

Our systems communicate with a wide variety of PLCs, flow computers, RTUs and other field devices through any communication format, including satellite, radio, cellular, etc.—integrating seamlessly with any existing field. For more information, contact info@spl-inc.com or call (877) 775-5227.
